Not just a simple financial product but a technology for any industries that need trustworthy asset's distribution.

$3.1T market

The business value-add of blockchain at 2030 Forcasted by Gartner.

Meaning of existence

① Asset distribution infrastructure

Effects

② Highly liquid assets — Trust

transparency and immutability

Characteristic properties

③ Tokenization and smart contract — Decentralization

Distributed system and Consensus mechanism

Basic properties

④ Digital ledger technology

Blockchain explanation hierarchy

REINDEER TECHNOLOGY PTE.LTD.

Check points for blochchain adoption.

CHECK 1 ✓ What asset would you like to include in degital ledger?

CHECK 2 ✓ Do you need to tackle both the improvement of liquidity through transaction traffic clarification and securitization, as well as preserving reliability, in order to encourage that distribution?

CHECK 3 ✓ Can you rely on existing organizations or securities in order to carry out a transaction?
